

## Alternate Battery Mounting and New Receiver Option for the E-Bandit

Batteries vary in dimensions a small amount, some Thunder Power 7700 mAH 65C batteries are coming in a little taller than others. David Payne showed us this simple solution to secure the battery without deforming the fuselage.

- Use two Velcro straps per battery, front and rear, instead of one over the top.

**Metallic Charcoal Spektrum Scheme**

As you can see, this model is a custom Spektrum demo plane. David is using this aircraft to showcase the new Spektrum Cockpit receiver. This aircraft features pneumatic retracts and servo driven gear doors, all sequenced by the receiver.

The AR12200 has the following features:

- 6 servo, 12 sequence servo built in gear and door sequencer

- Built in dual isolated 10 amp, 5.9 or 7.4V voltage regulators
- Built in telemetry when connected to the TM1000 X Bus connector
- Up to 4 pre-mixed dual channels available with built in adjustable servo matching
- Accepts NiCd, NiMh, LiPo/Li-ion, and LiFe battery chemistries
- High Resolution 128x64 pixel OLED display
- Frame rate is selectable to be either 12ms, 15ms, 18ms, or 21ms
- Programmable fail safe positions
